BOROUGH OF EYE.

Sanitary Inspector's Office,

Lambseta Street,

Eye, Suffolk.

ANNUAL REPORT OF THE SANITARY INSPECTOR FOR THE YEAR 1942

The General Sanitary condition of the Borough remains at approximately the same level as reported in 1941. Some owners have voluntarily connected their Properties to the new Public Sewer and Water Main, but many still remain to be connected. War Conditions, lack of materials and labour have slowed up this work. The Council itself has not been able to proceed under Sections 47 or 42 of the Public Health Act 1936 to compel conversions of Pail to Water Closet, and many properties urgently needing the convenience of drainage will it appears have to wait.

SEWERAGE

The Sewerage system as a whole functions fairly satisfactory, but the Irrigation Area at the Disposal Works, is still (as pointed out in my last report) in an unsatisfactory condition. Nothing effective has in the past year been done to the irrigation areas. These are still inefficient, allowing the effluent to pond and become septic, and by constantly delivering in the same spot the land is at these points overworked and sewage sick.

Much work is necessary here to bring these incompletd works to a satisfactory state, and to prevent the untreated effluent gaining access to the ditch on the eastern side of the field.

PAIL CONSERVANCY SYSTEM.

The Council has unfortunately still to maintain the dual service of Main Sewerage, and Night Soil carting. Owing to War Conditions it is useless to proceed under Statutory Powers for conversion of pail to water closet, and it is hoped that as many owners as can arrange for the necessary labour and materials, will proceed with the work of conversion. I must again point out the unsatisfactory conditions prevailing with respect to the drainage at the Council property at Victoria Hill. These 22 houses have no drainage facilities at all and there is nowhere to dispose of the slop and soapy water produced at the premises other than on to heavy land gardens, which slope down towards the backs of the houses. If it is not practicable at the moment to carry out closet conversions at these houses possibly slop drainage could be provided, together with a laid on water supply.

SCAVENGING

This work proceeds as in previous years, but with an added

tinned can content, due to the increased amount of canned goods provided under War Conditions. Unfortunately these tinned cans have no market or Salvage value, and are only a liability on the Council for disposal. This latter is now well nigh impossible and the tinned cans are accumulating at the refuse dump in a large heap creating Rat Habourage, and causing extra liability in the killing of Rats. It is hoped that it will not be long before the ash etc. at the refuse dump can be diverted from night soil panning, for the use in controlled tipping of refuse, whereby the tinned can would be buried.

STATISTICS.

SALVAGE

Is still carried out by a separate Committee, and does not comprise part of my duty. If it were practicable to salvage and dispose of tinned cans as sorted from the refuse at the Incinerator; the points relevant to these, (mentioned in my report under Scavenging) would not arise.

MILK SUPPLY

No complaint has been received of quality or method of distribution of the Milk Supply for the Borough.

FACTORIES, WORKSHOPS, FRIED FISH ESTABLISHMENTS & SLAUGHTER HOUSES

No complaint has been received regarding any of the establishment and no Statutory action has had to be taken with respect thereto.

HOUSING

No action under the Housing Acts has been taken other than the effort to maintain properties in a wind and watertight condition.

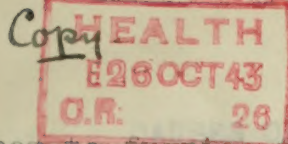

EVACUATION

No action regarding health matter from the Sanitary Inspector's standpoint has had to be taken in respect of this scheme.

Yours obediently,

(Signed) H. Austin Reeve.

Sanitary Inspector.

LIBRARY

GENTLEMEN;

I beg to furnish the annual report on the sanitary condition of the Borough for the year ending 31st December 1942.

Area	4410 acres
Population	~~1560~~ 1781
Inhabited houses	438
Rateable value	£7425
Sum raised by Id. rate	£30-57

STATISTICS.

M F Total

BIRTHS

legitimate	6	11	17	Rate per 1000 pop.
illegitimate	4		<u>4</u>	13.4
			21	(rate for England 15.9)

DEATHS

all causes	11	11	22	14.1
				(rate for England 11.6)

Infant mortality (under 1 yr.)	2	Rate per 1000 live births
		95.2
		rate for England 49

No deaths occurred from Diarrhoea under 2 yrs nor from puerperal pyrexia

Infectious diseases.

Pneumonia 4, aged 20, 40, 65, 66.
Whooping cough 1 aged 3.
Opthalmia 1 age 2 weeks.
Undulant fever 1 aged 22.
Dysentery 1 aged 31

The last two were in serving soldiers.

Tuberculosis

New cases; 2 pulmonary males, aged 45 and 50.
2 non-pulmonary females, aged 56 and 66.

No deaths took place; 9 cases remain on the register.
Notification of all infectious diseases is satisfactory.

CAUSES OF DEATH.

	M	F		M	F
Cancer			Bronchitis		1
mouth	1		Pneumonia	1	2
stomach		1	Nephritis	1	
other sites	3		Birth injuries		1
Apoplexy		4	Other causes		1
Heart disease	5	1			

General statement.

Diphtheria inoculation.

This has continued satisfactorily. 39 cases were done and it is estimated that 68% of those under five are done and 70% of those of school age. The former is a sharp increase, due to the welfare centre and the work of Nurse Lockwood.

Scabies.

Owing to increased prevalence, treatment in hospital was afforded by the County M.O.H. for cases which had proved resistant to home surroundings.

Tuberculosis.

Access to records was authorised to Billetting officers to avoid possible contact with existing cases.

Water and sewage.

The completion of the liaison between these is not yet complete and the latter therefore not satisfactory. Detail is given in the Sanitary Inspector's report with which I fully concur.

A.R.P.

No change has taken place in the arrangements but valuable exercises have been held. First aid work was good, the lack of stretcher bearers was shown. It is hoped that this will be remedied by the formation of a squad under an independent leader.

(Signed)

H. Pedler.

M.O.H.
